

PayTrace EMV 2.0 is our fast and easy card-present solution that is available from your mobile device or our Virtual Terminal. It's a secure, simple way to qualify in-person commercial card transactions for Level III interchange rates.

With PayTrace EMV 2.0 you can:

Add secure, inperson payments to your software solutions

Optimize Level III
B2B transaction
savings from the
PayTrace Go mobile
app or Virtual Terminal

Shift fraud liability for in-person transactions

Receive better card processing rates than key-entered transactions

Accepting chip cards is easy – merchants just need a computer with an internet connection and a chip card reader. Simply plug in the reader and you're ready to run an EMV transaction that can qualify for better B2B card processing rates through our interchange optimization. You can also integrate our new EMV solution through our API.

PayTrace currently supports EMV 2.0 on the Fiserv and TSYS processor connections.

TSYS

Desktop card reader: ID Tech Augusta Mobile card reader: VP3300

Desktop card reader: ID Tech Augusta Mobile card reader: coming soon

The setup is quick and easy-simply plug the EMV reader into your internet-connected computer and go!

Check out a demo of the setup on our YouTube channel.

"PayTrace EMV on mobile is super easy and quick. I can run a credit card on the job site with just my mobile phone."

—DAVE, Construction

"We love the phone app! Second, we receive a report every night of transactions. Third, we receive the money the next day! Fourth, the rates you charge are fair. Fifth, the customer support is awesome."
